EDUCATION

Texas State University

San Marcos, TX

B.S. Computer Science (Computer Engineering) | Minor in Applied Mathematics & Data Analytics

GPA: **3.30** | Expected Graduation: **Dec 2026**

EXPERIENCE

MTX Group – Frisco, TX

June 2026 – July 2026

Business Analyst Intern

- Synthesized requirements across **300+ documents** and manually engineered complex payment platform user stories mandating exactly **5 acceptance criteria** and **5 assumptions**, utilizing AI solely to expedite the drafting process.
- Map-designed complex transaction value chains, process workflows, and ERDs from scratch, converting massive data inputs of up to **150,000 cells** into structured JSON schemas with minor automated script validation.
- Orchestrated structured prompt templates using the **5-element PARTS framework** to extract insights from **300+ documents**, manually refining automated text outputs into structured JSON schemas while enforcing deterministic boundaries to protect **100% of sensitive PII**.

HP Inc - Spring, TX

Supply Chain Engineer Intern

May 2025 – August 2025

- Evaluated AI-powered risk intelligence platforms processing thousands of real-time data sources, assessing model accuracy and output reliability to inform enterprise tool selection.
- Developed a production-ready recommendation report and presented findings directly to upper management, translating complex technical analysis into clear, actionable business insights.
- Improved upstream supplier visibility to **95%**, strengthening business continuity through enhanced risk detection and proactive analytics.

PROJECTS

Fleet Support Analytics & Forecasting| Python, PostgreSQL, Power BI

September 2026

- Isolated a defective battery batch at **2.8x** the failure rate of the next-worst cohort across **3,000** devices and **5,505** tickets.
- Forecasted monthly ticket volume by region and built a Power BI dashboard over **5,500+** tickets.
- Identified Critical tickets take about **15x** longer to resolve than Low, driving a severity-based SLA recommendation.
- Built a ticket classifier that auto-tags support tickets at **88%** held-out accuracy.

Energy Consumption Backend & Analytics System| Python, PostgreSQL

January 2026

- Constructed a normalized PostgreSQL schema to store and query **3K+ electricity consumption records** across **10+ neighborhoods** for time-series KPI computation.
- Designed optimized SQL queries for multi-neighborhood aggregation with configurable time-window filtering (30d/90d/all).
- Implemented RESTful FastAPI endpoints delivering structured JSON with daily/weekly aggregation and dynamic filtering.

TECHNICAL SKILLS

Languages: Python, SQL (PostgreSQL, MySQL), C++, Java

Data & Analytics: ETL pipelines, data modeling, schema design, time-series aggregation, Tableau, Power BI (DAX), Excel

AI & Automation: AI-powered tool evaluation, AI-assisted analysis, prompt engineering (Claude, ChatGPT, Gemini)

Dev & Cloud Tools: Git/GitHub, Docker, AWS (S3), Jira (Agile/Scrum), Bitbucket, VS Code, FastAPI

ORGANIZATIONS/LEADERSHIP

Vice President of NSBE

May 2026 – Present

- Partner with chapter President to lead executive decision-making and oversee coordination across **10+ board members**, ensuring alignment on chapter goals and initiatives.
- Manage the entire Membership Zone, directing **5** chair positions to align programming, service, and academic initiatives with chapter goals and drive member engagement.

Vice President of IEEE Computer Society

September 2025 - Present

- Doubled chapter membership by acting on member feedback shifted the event calendar toward hands-on workshops and industry speaker nights, which drove a **60% jump** in average attendance.
- Planned and ran **5+ technical events** per semester for **25+ members**, including workshops, speaker nights, and networking sessions.
