EDUCATION

Texas State University

San Marcos, TX

B.S. Computer Science (Computer Engineering) | Minor in Applied Mathematics & Data Analytics

GPA: 3.38 | Expected Graduation: Dec 2026

TECHNICAL SKILLS

Languages : Python, SQL (PostgreSQL, MySQL), C++, Java

Data & Analytics: ETL pipelines, data modeling, schema design, time-series aggregation, Tableau, Power BI (DAX), Excel

AI & Automation: AI-powered tool evaluation, AI-assisted analysis, prompt engineering (Claude, ChatGPT, Gemini)

Dev & Cloud Tools: Git/GitHub, Docker, AWS (S3), Jira (Agile/Scrum), Bitbucket, VS Code, Flask

EXPERIENCE

MTX Group - Frisco, TX

June 2026 – July 2026

Business Analyst Intern

- Translated **300+** requirement documents into development-ready user stories for a payment platform, using Gemini to accelerate drafting while standardizing each to **5 acceptance** criteria and **5 assumptions**.
- Designed transaction value chains, process workflows, and ERDs from scratch, converting datasets of up to **150,000 cells** into structured JSON schemas with script-based validation.
- Engineered reusable prompt templates (PARTS framework) to extract insights from **300+ documents**, with deterministic guardrails that kept **100% of sensitive PII** out of AI outputs.

HP Inc - Spring, TX

Supply Chain Engineer Intern

May 2025 – August 2025

- Evaluated AI-powered risk intelligence platforms processing thousands of real-time data sources, assessing model accuracy and output reliability to inform enterprise tool selection.
- Pitched a production-ready AI platform recommendation directly to C-suite executives, translating complex technical analysis into actionable business insights.
- Improved upstream supplier visibility from **45% to 95%**, strengthening business continuity through enhanced risk detection and proactive analytics.

PROJECTS

Fleet Health & Support Forecasting | Python, PostgreSQL, Power BI

September 2026

- Isolated a defective battery batch at **2.8x** the failure rate of the next-worst cohort across **3,000** devices and **5,505** tickets.
- Forecasted monthly ticket volume by region and built a Power BI dashboard over **5,500+** tickets.
- Identified that Critical tickets take about **15x** longer to resolve than Low tickets, driving a severity-based SLA recommendation.
- Built a ticket classifier that auto-tags support tickets at **88%** held-out accuracy.

DeskOracle – AI-Assisted IT Ticket Triage System | Python, FastAPI, Streamlit, scikit-learn

September 2026

- Built and deployed an AI ticket triage app (FastAPI, Streamlit) that uses TF-IDF knowledge-base retrieval and the Claude API to predict category and priority, with a rule-based fallback.
- Evaluated the classifier on **2,883 synthetic** tickets (**98% accuracy**); precision/recall analysis exposed a **75.6% recall** gap on Security tickets that accuracy alone hid.
- Wrote a **22-test** pytest suite with GitHub Actions CI, including mocked-LLM failure tests, and centralized category definitions to prevent silent label drift.

ORGANIZATIONS/LEADERSHIP

Vice President of NSBE

May 2026 – Present

- Grew chapter membership from **10 to 60+ members**, partnering with the President to lead executive decisions across a **10+ member** board.
- Lead **5 chairs** in the Membership Zone to deliver **9 events** this semester, including a study jam, community service event, and middle school PCI outreach.

Vice President of IEEE Computer Society

September 2025 - Present

- Doubled chapter membership by shifting the event calendar toward hands-on workshops and industry speaker nights based on member feedback, driving a **60%** jump in average attendance.
- Planned and ran **5+ technical events** per semester for **25+ members**, including workshops, speaker nights, and networking sessions.
